Hacking Policy for the Maker Movement

Meet the brokers of Industry 4.0 and join visionaries and game-changers from the maker movement for a debate on how to shape the European Industrial Policy of the Future.

The event will showcase success stories of innovative partnerships between makers and manufacturers, currently developing cutting-edge technical solutions that can break barriers to social change.

This will inspire a policy debate investigating the current framework around the maker movement and discussing policy recommendations that can contribute to the thriving of the open manufacturing paradigm and sustainable industry across Europe.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 687941

OpenMaker is funded by the European Commission's Horizon 2020 research and innovation programme, grant agreement n. 687941. The initiative aims at creating a transformational and collaborative ecosystem that fosters collective innovations within the European Manufacturing sector.
